

CYBER AWARENESS

The Fantastic
Security Activity Book!

All online! Everybody secure? Easy as pie!

funny colouring
pictures,
funny stories
and delicious recipes
all about cyber security

"Super! That makes homework really fun: we are supposed to use the internet to research our school project on tree frogs."

"Yes! I love surfing the web! It's going to be exciting..."

VIRUS WARNING!

"Now what?!"

"Oh no! Mom's computer has a virus! What should we do now?!"

"I'll bet AwareNessi can help us. Let's call him!"

"Hi, kids! I have to take the computer to my workshop. You shouldn't take viruses lightly! You've seen what they can do. Viruses are small, nasty programs that hackers send with emails. When they run, files might suddenly disappear on the infected computer. Or your computers will get really slow and soon stop working altogether - like in your parents' case.

These nasty viruses hide in email attachments, like photos and videos. Or you could download them from the internet - without noticing anything - when you click a link...

But don't worry, I'll fix everything - and install antivirus software for you. That will keep them at bay in the future. But your parents have to be more careful! Above all, never click attachments or links in emails you receive from strangers! That's the most important thing!

Will these nasty mugs look better with some color?

Researching: Seek and find on the Internet

"Well, kids - looks like it isn't that easy to find what you're looking for on the internet, is it? You already know that the browser is your important tool for finding things on the web. It's the starship you use to explore cyberspace. On your monitor, it looks like a big window that lets you see everything you can find.

But first you enter the address of a search engine in the bar at the top of your browser - for example, www.google.com. Everyone knows Google. After all, search engines are just computers, too. But they know the addresses of almost all the websites all over the world! If you want to find out a smart answer to a question, you just fly to a search engine. It's simple!

The website has a field where you can type in your questions - for example, *'Do tree frogs like ice cream?'* Just hit Enter... and in less than a second, the search engine shows you a list of texts, pictures, and videos that seem related to your question or similar questions. You can now check the hit list to see the answers to your question."

Something's missing here! Connect the dots - and find out who the beautiful teeth belong to!

Hmmm,
which way leads to my
friends? I don't want to
end up with those nasty
beasts...

Golden Dragon Wisdom:
The Internet is like this game:
You never know exactly where you'll end up.
So you have to be very careful!

You can triumph over the virus!

"What luck! There's something that fights these nasty computer viruses: anti-virus programs round up the little monsters. But it's better to not let viruses on your computer at all! Before you discover them, the intruders might have deleted all your vacation pictures from last summer, or all your emails from your best friend... We learned how to surf the internet safely while we were doing our research on tree frogs - do you remember? Exactly!

First of all: Never open attachments in emails from strangers.

Secondly: Never click links in emails from strangers.

And thirdly: Pay attention! Just what am I clicking in my browser window anyway? Does anything seem strange? If you and your parents check carefully, you'll be the winners in the battle for your computer!"

Okay,
the start of the maze is
clear. But should I go down
first, or to the right...
help me out!

Start

Finish

Let's go on a monster hunt! Can you find the 9 little attackers? They're hiding somewhere in the picture. Draw a circle around every virus!

Golden dragon wisdom:

Viruses are experts at hiding! That's why you need anti-virus software on every computer. It will track down the little pests. The faster the better!

A case for the entire family!

"And now we have a real internet mystery for you to solve! Ask your mom or dad to join you. I think they'll be interested, too! Imagine this: After you get up every morning, you check your emails. And surprise! You've won something! You just have to click the link in the email to find out how to get your prize..."

Well?! Do you smell a rat? What would real internet detectives do if they got this email? Let's see who figures it out first..."

We're finally going back to school! But as you know, everyone has to wear a mask. Let's make some ourselves, so we'll always have clean ones with us!

We maintain social distancing at school! 1.50 meters - and wear masks. So we'll stay healthy!

You can make a mask quickly and easily, even if you can't sew!

All you need: an old T-shirt that you don't wear anymore and (optional) a piece of wire

Step 1: Cut out a rectangle along the lower edge of the T-shirt. The rectangle should be 15 cm high and 35 cm wide.

Step 2: On the left and right, along the shorter sides of the rectangle, cut a strip around 2 cm wide from the lower edge up to around 2 cm below the upper edge. Be careful not to cut all the way through!

Step 3: Cut small slits on both ends, around 2 cm inwards from the hanging strips. The slits should be cut around 2 cm above the lower edge (for your ears).

Step 4 (optional): You can slide a piece of wire into the T-shirt seam, so you can adapt the mask to the shape of your nose and cheeks.

And your mask is already finished! Pull the slits over your ears and tie the loose fabric strips together behind the back of your head. If you want, you can also insert a piece of paper towel or coffee filter in the mask.

This easy recipe lets you make 18 cake pops. Try it with your parents!

Ingredients:

- 300g light or dark cake base (ready-made product or make it yourself)
- 60 g soft butter
- 70 g powdered sugar
- 40 g double cream cheese
- 150 g chocolate glaze (any brand)
- 18 wooden skewers at least 15 cm long
- decoration, such as sugar pearls

Preparation:

1. Crumble the cake base into fine crumbs. To make the cream cheese mixture, use a hand mixer to stir the butter, powdered sugar, and cream cheese thoroughly for about 3 minutes. Use a spoon to add the cream cheese mixture to the cake crumbs incrementally, stirring regularly until the mixture is easy to shape. But make sure it isn't too moist - it shouldn't stick to your hands when you're shaping it.
2. Divide the mixture into 18 portions, which you roll into small balls. Chill the cake balls for approx. 30 min. While the cake balls are being chilled, chop up the chocolate glaze and melt it over a warm water bath. Dip each wooden skewer around 1 cm deep into the cake glaze and then stick it into a cake ball. Place all the cake pops onto a plate and chill them for another 15 minutes.
3. Warm up the cake glaze again, if necessary. Dip each cake pop into the chocolate glaze at an angle and rotate it until it is completely covered. Tap the skewer against the side of the bowl to get rid of excess drops. Rotate the cake pop while doing so, to avoid nib formation. Decorate with sugar pearls, sprinkles, or other coatings however you like. Repeat the process for each cake pop.
